Education

University of Massachusetts Boston — **September 2023 – Expected December 2026**
B.A. in Computer Science — *GPA: 3.7*

Technical Skills

Languages: C/C++, Java, JavaScript, Python, SQL, HTML/CSS
Cloud & Tools: AWS, Docker, Git, Jenkins, Terraform, Datadog, Grafana, VMware, Artifactory, GitHub Actions, Snyk
Frameworks & Libraries: NumPy, Boto3, Pandas, GitPython, PyTest, PyTorch, Poetry
Databases: DynamoDB, MongoDB

Professional Experience

Software Engineer Intern — **June 2026 – Current**
Sonos - Software Engineering Productivity — *Boston, MA*

- Refactored Sonos speaker simulators to use an event-driven API, making simulated hardware behavior easier to test and debug
- Supporting migration of simulator integration tests from Jenkins to GitHub Actions to improve CI maintainability and developer workflow
- Developing AI-assisted guidance files such as CLAUDE.md to make simulator extensions easier, including new device drivers and future speaker device models

DevOps Engineer Intern — **February 2026 – May 2026**
Palo Alto Networks - CyberArk R&D — *Needham, MA*

- Assist in building scheduled monitoring pipeline for supply-chain security scanner findings across services, publishing compliance metrics and anomalies to Datadog for real-time visibility into Snyk and security findings
- Made a bulk service-metadata updater in Port, allowing teams to update configuration across registered services in one workflow instead of manual service-by-service changes

DevOps Engineer Intern — **June 2025 – February 2026**
CyberArk - R&D Software Development — *Newton, MA*

- Developed an event-driven AWS Lambda service using Python, API Gateway, and SNS to audit and remediate GitHub repository metadata for compliance, replacing manual repository checks
- Created an artifact signing dashboard using Artifactory and Datadog's API to track signed, unsigned, and unsupported release binaries across macOS and Windows artifacts
- Refactored scanner image-version tagging logic, reducing security scan runtime across scanner pipelines

DevOps Engineer Intern — **May 2024 – August 2024**
Draeger - R&D Software Development — *Andover, MA*

- Integrated VMware vSphere metrics into Grafana using Python SDKs and REST APIs, exposing real-time health monitoring for 40+ servers
- Refactored the Python codebase handling Jira's REST API, reducing Jenkins build times from 2 hours to under 5 minutes (95% improvement) by caching API responses and optimizing queries
- Deployed Grafana as the company's first observability tool, allowing for cross-departmental data visualization and improving decision-making

Projects

Network Intrusion Detection | *Python, PyTorch, Scikit-learn, Pandas, NumPy, Matplotlib* — **May 2026**

- Built a neural network intrusion detection pipeline on the NSL-KDD dataset, preprocessing network traffic with one-hot encoding and standardization before training supervised MLP and autoencoder models for binary attack detection

Vital Sense | *C/C++, Arduino IDE, IR Sensor, RTC Module* — **March 2025**

- Designed and built a heart rate monitor with +/- 5-10% SpO2 and heart rate accuracy at $25 in component cost, compared to $200+ commercial alternatives

Leadership / Extracurricular

Tri-Alpha Honor Society Member — **Spring 2025 – Present**
National Honor Society for First Generation Students — *University of Massachusetts Boston*

Undergraduate Research Assistant — **Fall 2024 – Spring 2025**
Computer Science / Asian Studies Department for AI Research — *University of Massachusetts Boston*

Microsoft TEALS — **Fall 2024 – Spring 2025**
Computer Science Teaching Assistant — *Josiah Quincy Upper School*

UMass Boston CS Club — **Fall 2023 – Spring 2024**
Vice President of Finance — *University of Massachusetts Boston*
