# Prentice Tang

prenticetang@gmail.com | LinkedIn | GitHub | Portfolio

## Education

**University of Massachusetts Boston** **September 2023 – Expected December 2026**
*B.A. in Computer Science* *GPA: 3.72*

## Technical Skills

**Languages**: C/C++, Java, JavaScript, Python, SQL, HTML/CSS
**Cloud & Tools**: AWS, Docker, Git, Jenkins, Terraform, Datadog, Grafana, VMware, Artifactory, Kubernetes, Snyk, Linux
**Frameworks & Libraries**: NumPy, Boto3, Pandas, GitPython, PyTest, PyTorch, Poetry
**Databases**: DynamoDB, MongoDB

## Professional Experience

**DevOps Engineer Intern** **September 2026 – Present**
*Palo Alto Networks - Idira R&D* *Needham, MA*
- Extended the AI agent skill behind an in-house dependency automation tool, adding new-repo onboarding and IaC deployment detection to prevent PRs from triggering staging deploys
- Diagnosed a silent Port-GitHub integration failure behind a service outage; shipped a Python fix and built Datadog monitors to close the alerting gap

**Software Engineer Intern** **June 2026 – August 2026**
*Sonos - Software Engineering Productivity* *Boston, MA*
- Refactored legacy speaker simulators from direct exported function calls to an event-driven API that more accurately mimics real hardware behavior, improving testability and debugging
- Developed a CLAUDE.md workflow guiding AI-assisted simulator driver creation, from tracing real hardware behavior to implementation, ioctl-level Python validation, and YAML-based linting

**DevOps Engineer Intern** **February 2026 – May 2026**
*Palo Alto Networks - CyberArk R&D* *Needham, MA*
- Assisted in building scheduled monitoring pipeline for supply-chain security scanner findings across services, publishing compliance metrics and anomalies to Datadog for real-time visibility into Snyk and security findings
- Made a bulk service-metadata updater in Port, allowing teams to update configuration across registered services in one workflow instead of manual service-by-service changes

**DevOps Engineer Intern** **June 2025 – February 2026**
*CyberArk - R&D Software Development* *Newton, MA*
- Developed an event-driven AWS Lambda service using Python, API Gateway, and SNS to audit and remediate GitHub repository metadata for compliance, replacing manual repository checks
- Refactored scanner image-version tagging logic, reducing security scan runtime across scanner pipelines by up to %70

**DevOps Engineer Intern** **May 2024 – August 2024**
*Draeger - R&D Software Development* *Andover, MA*
- Deployed Grafana as the company's first observability tool, integrating VMware vSphere metrics via Python SDKs and REST APIs to monitor health across 40+ servers
- Refactored the Python codebase handling Jira's REST API, reducing Jenkins build times from 2 hours to under 5 minutes (95% improvement) by caching API responses and optimizing queries

## Projects

**Homelab** | *Proxmox VE, Home Assistant, Tailscale, Linux, IoT* **May 2026 – Present**
- Provisioned a dedicated Home Assistant VM on Proxmox with isolated networking, persistent storage, automated backups, and secure remote access through Tailscale
- Integrated IoT devices into custom dashboards and event-driven automations for device status, media control, and household routines

**Vital Sense** | *C/C++, Arduino IDE, IR Sensor, RTC Module* **February 2025 - March 2025**
- Designed and built a heart rate monitor with +/- 5-10% SpO2 and heart rate accuracy at $25 in component cost, compared to $200+ commercial alternatives

## Leadership / Extracurricular

**Undergraduate Teaching Assistant** **Fall 2026 – Present**
*Operating Systems* *University of Massachusetts Boston*

**Undergraduate Research Assistant** **Fall 2024 – Spring 2025**
*Computer Science / Asian Studies Department for AI Research* *University of Massachusetts Boston*

**Microsoft TEALS** **Fall 2024 – Spring 2025**
*Computer Science Teaching Assistant* *Josiah Quincy Upper School*

**UMass Boston CS Club** **Fall 2023 – Spring 2024**
*Vice President of Finance* *University of Massachusetts Boston*
